Client

Ex. 8 Personal Privacy (PP)

Patient **Ike**

Next Dose Due: when you get home

*This medication is an antibiotic. We are sending you home with 1 week's worth. If Ike is doing well over the next week, this medication should be continued for a total of 4 weeks in order to ensure clearance of any infection. You will need to refill this medication.

Diet:

--Offering canned food or tuna can entice kitties to eat.

--It can also help to warm the food slightly (not too hot!) to encourage them to eat.

Follow-Up:

--We recommend that you take Ike to **Indian Springs Veterinary Clinic** in 1-2 days for re-evaluation. Call them as soon as possible to make an appointment. If Ike is showing any further signs of decline prior to this appointment, he should be reevaluated by a veterinarian sooner.

Please note: Federal law prohibits the return of prescribed medications.

I have received the following: Medication(s), Prednisolone, Clindamycin, Mirtazapine

I authorize the release of information to the veterinary hospitals indicated above and to veterinarians, financial institutions, and insurance providers requesting records and information pertaining to the care received here.

I understand the above "DISCHARGE INSTRUCTIONS."

Client: _____ Time: _____

6/17/2020

The veterinarians and the staff thank you for entrusting us with the care of Ike.
